

CareerFairy 1.0 Install Guide

Pre-requisites/Dependent Libraries:

- Windows 7 or later pre-installed
- Computer with keyboard and mouse/trackpad
- Microsoft Office (preferably MS Excel) pre-installed
- Microsoft Visual Studio pre-installed
- .NET Framework pre-installed

Installation/Running the application:

1. Open Visual Studio.
2. Go to the View tab in the menu bar and ensure Team Explorer is showing.
3. In the Team Explorer tab, click the green plug at the top of the tab.
4. Then, under “Local Git Repositories”, click the clone button and enter the git repository URL we have provided in this document.
5. After you have verified that you entered the correct URL, click clone.
6. Now, open “careerfair.sln” from the main team explorer menu.
7. Compile the project and then run it from the build menu.
8. CareerFairy 1.0 will now open in a separate window and you are good to go!

Troubleshooting:

- As you import the Simplicity Data into the application, be sure to check that the excel file which contains the simplicity data you are trying to import is not open and being edited upon. Otherwise, the application is known to crash.
